

Jimmy HATED his Vegetables!

STIMULATES HUNGER

If your child is a poor eater—if he never seems hungry at mealtime—if he's underweight and nervous, it may be due to "Missing Links" in the diet. In other words, no matter how well fed the child may be, his diet may be deficient in certain factors needed to maintain normal hunger and growth.

Many mothers are giving their children Ovaltine to supply these "Missing Links." This food beverage contains 31 food factors—Vitamins, Minerals, Protein, Carbohydrates, Lipids—Including the very important

Vitamin B, which is absolutely indispensable to good appetite. Without enough of this vitamin, hunger lags.

Ovaltine contributes another very important help to the diet:—It has the peculiar power to aid the digestion of starches in the stomach. This means the stomach empties sooner... digestion is speeded up! Normal hunger can return sooner!

Also, Ovaltine makes milk easier to digest.

If your child won't eat his vegetables and other healthful foods, give him Ovaltine! See if his hunger doesn't pick up and his weight increase.

Mothers report remarkable results. Get a can at your grocery or drug store.

Orphan Annie MUG

SPECIAL OFFER!

Children love to have their very own mug and the gift is very special. Encourage them to drink their Ovaltine milk and principles are of Orphan Annie and her dog Sand. Send for one of them today!
