FOR THE CHILD WHO LACKS THE "URGE" TO EAT

Is Thin and Nervous--Modern Science Points to

NEW IMPROVED OVALTINE

HOW THIS "PROTECTING" FOOD can safeguard your Child's Health

FOR her child's welfare, every mother should read the recent news articles have reported, you see, and that you may have discovered startling facts about child health.

For science has proved that certain vital food elements are absolutely necessary to normal growth and development and are frequently deficient in our ordinary foods. So it is especially deficient, that one-third of our people in all walks of life don't get enough of them for normal health. And these deficiencies often occur where they are least suspected, and now known to cause many heretofore baffling conditions.

Naturally millions of mothers are alarmed by this news. For serious things happen when these elements are lacking. For example, if a child doesn't get enough Vitamin B1, he can't have good appetite or sound nerves. Lack of one of the other elements results in stunted growth, soft, crumbly bones, bad teeth, impaired sight, loss of strength.

All this may be news to the public, but for many years Ovaltine has pioneered the need of *appetizing* food. And in step with new knowledge, Ovaltine has been steadily enriched in its important food elements.

Thus today, thousands of mothers are giving their children new, improved Ovaltine religiously, to end and prevent common food deficiencies. More than a mere vitamin

enricher, Ovaltine supplies a wider variety and we do not of any particular food elements than any other in a normal food. It gives a child just what he needs, Vitamin A, B1, B2, C, D, E, K, and also all the Calcium, Phosphorus, Iron, Magnesium, and other elements of complete, high quality nutrition. It's all in one, and it's all in a glass.

So with a glass of Ovaltine, added to each meal, you'll have no worry--your child's practically certain to get all the food elements he needs for healthy appetite, normal growth, sound nerves--for vigorous, glowing health.
