NATIONAL: COVID CONCERNS REMAIN LOW; FEW WANT RETURN OF MASK MANDATES

Vaccine booster rates hit a wall; rejected by most Republicans

West Long Branch, NJ –The latest *Monmouth (“Mon-muth”) University Poll* finds that concern about family members becoming ill from the coronavirus remains relatively low and is approaching the nadir it hit briefly last summer. This comes as reports of COVID-19 infections are leveling off. Only one-third of the public supports a return to face mask and social distancing guidelines and about 4 in 10 backs workplace vaccine mandates.

The number of people who are very concerned about a family member becoming seriously ill from the virus remains steady at 23%, the same as in March. This number was 38% in January and hit a pandemic high of 60% one year before that. The current number of Americans (46%) who are either very or somewhat concerned about a family member falling ill with Covid is approaching the momentary low point for this number recorded last summer (42% in June 2021).

Concerned About Serious Covid Illness in Family

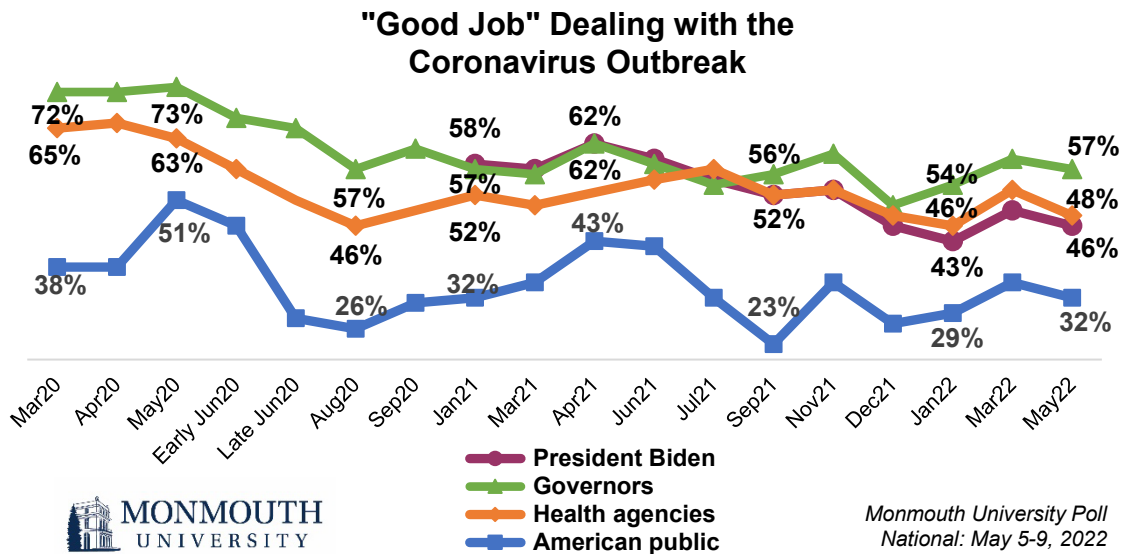

In the current poll, 35% of American adults report having tested positive for Covid. This finding is up from January (27%), but similar to March (38%). Another 13% say they were diagnosed without a test or believe they had the disease at some point during the pandemic.

Vaccine uptake, particularly getting a booster shot, remains static. Currently, just under half (49%) of adults report having received a Covid booster dose while one-third (34%) – including a majority of Republicans – say they are not at all likely to get it.

“Public health experts say that Covid is not in the endemic phase yet, but most Americans appear to be acting as if it is. Vaccine rates have hit a wall but few want to go back to a world of mask mandates,” said Patrick Murray, director of the independent Monmouth University Polling Institute.

Just 32% of the public supports instituting or reinstating face mask and social distancing guidelines in their state at the current time, which is similar to March (34%), but down significantly from January (52%). At the same time, support for requiring people to show proof of vaccination in order to work in an office setting or around other people has held steady – 42% now, 44% in March, and 43% in January. Large majorities of Democrats continue to back vaccine (78%) and mask (59%) mandates, while not much more than 1 in 3 independents and 1 in 5 Republicans agree.

Ratings for how different groups in the country have been handling the pandemic have ticked down just slightly over the past two months, including for President Joe Biden (46% good job, down from 49% in March), federal health agencies (48%, down from 53%), state governors (57%, down from 59%), and the American public (32%, down from 35%). Compared with January, though, the current results are a few points more positive for all four groups.

The *Monmouth University Poll* was conducted by telephone from May 5 to 9, 2022 with 807 adults in the United States. The question results in this release have a margin of error of +/- 3.5 percentage points. The poll was conducted by the Monmouth University Polling Institute in West Long Branch, NJ.

QUESTIONS AND RESULTS

(* Some columns may not add to 100% due to rounding.)

[Q1-31 previously released.]

32. How concerned are you about someone in your family becoming seriously ill from the coronavirus outbreak – very concerned, somewhat concerned, not too concerned, or not at all concerned?

| TREND: | May 2022 | March 2022 | Jan. 2022 | Dec. 2021 | Nov. 2021 | Sept. 2021 | July 2021 | June 2021 | March 2021 | Jan. 2021 |

| (n) | (807) | (809) | (794) | (808) | (811) | (802) |

* September/November 2021 polls did not specifically ask if person already got the booster, but included it as a volunteered response.

** Prior to March 2022, this includes results to a previous question on likelihood of getting any dose of the vaccine.

METHODOLOGY

The *Monmouth University Poll* was sponsored and conducted by the Monmouth University Polling Institute from May 5 to 9, 2022 with a probability-based national random sample of 807 adults age 18 and older. This includes 284 contacted by a live interviewer on a landline telephone and 523 contacted by a live interviewer on a cell phone, in English. Telephone numbers were selected through a mix of random digit dialing and list-based sampling. Landline respondents were selected with a modified Troidahl-Carter youngest adult household screen. Interviewing services were provided by Braun Research, with sample obtained from Dynata (RDD, n=532), Aristotle (list, n=137) and a panel of prior Monmouth poll participants (n=138). Monmouth is responsible for all aspects of the survey design, data weighting and analysis. The full sample is weighted for region, age, education, gender and race based on US Census information (ACS 2018 one-year survey). For results based on this sample, one can say with 95% confidence that the error attributable to sampling has a maximum margin of plus or minus 3.5 percentage points (unadjusted for sample design). Sampling error can be larger for sub-groups (see table below). In addition to sampling error, one should bear in mind that question wording and practical difficulties in conducting surveys can introduce error or bias into the findings of opinion polls.

| <i>DEMOGRAPHICS (weighted)</i> | |
