**Dr. Tiffany Medley**

Wednesday, October 6, 2021 | 11:40 am– 1:00p.m.

This lecture will discuss individual air pollutants that result as a product of the combustion of fossil fuels and the consequences of their emissions on our health and the environment. Differences between air pollutants and misconceptions such as in the role of carbon monoxide versus carbon dioxide and ground level ozone versus stratospheric ozone will be addressed. Air pollutants can be harmful to human health, other organisms, become deposited in water and land and/or cause global warming. Distinguishing air pollutants is critical in the discussion of climate change.

Tiffany L. Medley, Ph.D.

Lecturer

Monmouth University  
Department of Biology
