Monmouth University’s School of Science is a community of teacher-scholars actively fostering learning, quantitative reasoning, and scientific inquiry among its majors and among all students. A goal of the School is to lead in the innovative development and delivery of curricula and in providing creative solutions to problems that include significant technical components. Educational programs provide a student-centered learning environment that builds a foundation for lifelong learning, critical thinking, and collaborative, technical problem solving. Faculty scholarship interests include: original basic and applied research in a range of disciplines and scholarly work on science education and pedagogy. Undergraduate and graduate students are encouraged to participate in student-faculty collaborative research projects leading to the acquisition and dissemination of new knowledge in the sciences.

The School of Science offers undergraduate degree programs in Biology, Chemistry, Clinical Laboratory Science, Computer Science, Marine and Environmental Biology and Policy, Mathematics, Medical Technology, and Software Engineering, as well as minors in Biology, Chemistry, Computer Science, Information Technology, Mathematics, Physics, and Statistics and concentrations in Molecular Cell Physiology, Advanced Chemistry, Biochemistry, Chemical Physics, Cytotechnology, and Medical Laboratory Science.

The School of Science also offers master’s degrees in Computer Science and Software Engineering. The undergraduate BSSE program in Software Engineering is accredited by the Engineering Accreditation Commission of ABET, 111 Market Place, Suite 1050, Baltimore, MD 21202-4012; telephone: (410) 347-7700. The Chemistry, Medical Technology, and Physics Department is approved by the American Chemical Society (ACS). All qualified advanced chemistry, biochemistry, and chemical physics degree recipients are eligible to receive ACS certification of their degrees. The degrees in Clinical Laboratory Science and Medical Technology are accredited by the National Accrediting Agency for Clinical Laboratory Sciences (NAACLS). All programs of study are directed toward preparing students for working and living in a multicultural, technologically complex, global environment.

Studies in the School of Science provide students with a solid background in the technical aspects of their chosen scientific or engineering
field, sufficient to prepare them for further study in graduate or professional programs, or to compete for access to employment opportunities in industry or education. Core courses for the non-major stress the nature of the scientific enterprise and the benefits and risks that scientific advances present to society rather than the digestion of large doses of content from the discipline. Both major and non-major courses emphasize the importance of critical thinking and cooperative learning, clarify working to the scientific method in posing and answering questions concerning the natural world, and explore the nature of human problems for which technology may provide solutions.

RAPID RESPONSE INSTITUTE

Barbara T. Reagor, PhD. Director, Rapid Response Institute. A Bellcore Fellow and former Telcordia VP of Homeland Security, Dr. Reagor worked has for the past thirty-four years in the fields of National Security Emergency Preparedness, Disaster Prevention and Recovery, Crisis Management, Chemical Contamination, and Network Risk Assessment associated with telecommunications and information technology systems.

William Tepfenhart, PhD. Chief Technology Officer for the Rapid Response Institute and Associate Professor in the Department of Computer Science and Software Engineering. Dr. Tepfenhart’s experience ranges across a broad spectrum of activities (government, AT&T, and Monmouth University). He has performed in the role of instructor, researcher, software developer, and author. He is trained as a physicist, and his areas of expertise include object-oriented software development, artificial intelligence, and software engineering.

James Hammill, Research Scientist for the Rapid Response Institute and a Certified Disaster Recovery Planner. He was co-chair for the Response and Recovery Chapter with Dr. Reagor for the MIPT publication “Project First Responder.” He has also held positions at FEMA and AT&T.

Robert M. Kelly Jr., MSEE Stanford University. Adjunct Professor, Monmouth University. Synthesis of emerging and existing technologies into useful applications; RFID, large scale systems architecture and integration; work in all phases of technology development from the lab to customer support; operations, administration, and maintenance (OA&M) of complex computer/communications environments; customer/client and vendor relationship management, especially outsourcing; and processes for quality technology realization and support.

The Rapid Response Institute (RRI) provides research opportunities in support of Homeland Security and Homeland Defense for School of Science faculty and adjuncts as well as high school teachers and students, undergraduate and graduate students, and contracted or visiting scientists. This software engineering-based institute aims to develop decision-enhancing aids that enable early and enhanced threat identification and appropriate response in the support of the chemical, biological, radiological, nuclear, and explosive events. These same techniques can be applicable to homeland security/counterterrorism, natural disaster, environmental crisis, and pandemic scenarios, and this duality provides an open, accessible, and reasonably inexpensive test bed for the development of prototypes being designed to meet both domestic and military needs.

URBAN COAST INSTITUTE

Anthony B. MacDonald, Director. Mr. MacDonald brings over twenty-five years of executive and policy experience in coastal and ocean law and policy at the local, state, and federal level to the UCI.

James Nickels, Marine Scientist, Urban Coast Institute. Mr. Nickels has worked for over twenty-five years on marine research, monitoring, surveying, and field operations in both the public and private sectors.

The Urban Coast Institute (UCI) serves the public interest as a forum for research, education, and collaboration that fosters the application of the best available science and policy to support healthy and productive coastal ecosystems and a sustainable and economically vibrant future for coastal communities. The UCI efforts focus on the following program areas:

• Coastal Law and Policy
• Coastal Watershed Management
Ivan Gepner, Chair, Department of Biology

Pedram Patrick Daneshgar, Assistant Professor. BA, University of Delaware; MS, Saint Joseph’s University; PhD, University of Florida.

Ivan A. Gepner, Associate Professor. PhD, Princeton University. Specializes in genetics and developmental biology. Current interests include computer applications in biology, especially computer modeling and simulation of natural phenomena.

Ursula A. Howson, Assistant Professor. PhD, University of Delaware. Specializes in marine ecology, ichthyology, and invertebrate zoology. Current research includes physiological ecology and behavior of larval and juvenile fishes, and image-based analyses of ontogenetic changes in their morphology.

Kathryn A. Lionetti, Associate Professor. PhD, State University of New York at Stony Brook. Specializes in microbiology and molecular biology. Current interests include recombinant DNA technology, apoptosis, and applications of molecular biology in clinical diagnostic procedures and emerging viral diseases.

Dorothy Lobo, Associate Professor. PhD, The Catholic University of America. Specializes in cell and molecular biology, and signal transduction pathways. Current research includes the regulation of stress signaling pathways during cell proliferation and programmed cell death.

James P. Mack, Professor. EdD, Teachers College, Columbia University. Specializes in anatomy and physiology. Current research includes: antimicrobial effects of plant essential oils on bacteria including MRSA and MSSA and fungi and elucidating the comprehensive chemical mechanism for catalase (kinetic deviations and conformer multiplicity).

Michael A. Palladino, Dean, School of Science and Associate Professor. PhD, University of Virginia. Specializes in male reproductive biology and cell and molecular biology. Current research includes antimicrobial properties of male reproductive organs, and cellular and molecular responses to ischemia and hypoxia in the mammalian testis.

Karen Pesce, Lecturer. PhD, Rutgers University. Specializes in environmental microbiology. Current research interests include microbial community analysis and characterization of novel biodegradative genes from polluted environments.

Dennis E. Rhoads, Professor. PhD, University of Cincinnati. Specializes in biochemistry and neuroscience. Current research on neurobiology of alcohol and drug abuse.

John A. Tiedemann, Assistant Dean of the School of Science and Director of the Marine and Environmental Biology and Policy Program. MS, Florida Institute of Technology. Specializes in marine ecology, coastal zone management, environmental science, and marine and environmental education. Current applied research involves watershed management strategies and best management practices for coastal nonpoint source pollution.

Gregory Moehring, Chair, Department of Chemistry, Medical Technology, and Physics

Bradley J. Ingebrethsen, Lecturer. PhD, Clarkson University. Physical chemistry. Mass transport in aerosol systems, the fate of aerosols in the environment and in the respiratory tract, and the physical chemistry of cigarette smoke.

Robin R. Kucharczyk, Lecturer. PhD, Yale University. Inorganic chemistry. Organometallic
chemistry of molybdenum and approaches to teaching introductory chemistry.

Massimilliano Lamberto, Associate Professor. PhD, University of Southampton (UK). Organic chemistry. Small molecule synthesis for the inhibition of telomerase by G-quadruplex DNA stabilization; synthesis of novel chromophoric systems for dye-sensitized solar cells and sensor applications; synthetic methodology.

J. Luo, Lecturer. PhD, University of Pittsburgh. Analytical chemistry, Nanotechnology sensors for the real time monitoring of analytes.

S. Mallikarjun, Professor. PhD, University of London, UK. Primary field is liquid state physics. Current interests include study of crystals and international education.

Gregory Moehring, Associate Professor and Chair. PhD, Purdue University. Inorganic Chemistry. Synthesis and NMR characterizations of transition metal polyhydride compounds. Transformations of small molecules at transition metal polyhydride compounds.

Datta V. Naik, Vice Provost, Dean of the Graduate School and Professor. PhD, University of Notre Dame. Analytical-inorganic chemistry. Research interests are detection and control of process gases, air quality, and spectroscopic methods of analysis.

Ellen Rubinstein, Lecturer. PhD, University of Notre Dame. Polymer chemistry, water analysis related coastal lake eutrophication.

Danuta Szwajkajzer, Lecturer. PhD, Rutgers University. Biophysical chemistry. Chemistry of proteins and nucleic acids, thermodynamics of drugs binding to DNA, mechanisms of recognition for biomolecules, and studies of structure and thermodynamic changes of nucleic acids oligomers.

Tsanangurayi Tongesayi, Associate Professor. PhD, West Virginia University. Analytical chemistry. Speciation, geochemical cycling, and bioavailability of heavy metals in the environment, technologies and methods for the removal of toxic heavy metals and their compounds from drinking water, and analytical method development.

Xudong Yuan, Scholar in Residence. PhD, University of Georgia College of Pharmacy. Medicinal chemistry. Development of new delivery methods for APIs and/or genes.

**COMPUTER SCIENCE AND SOFTWARE ENGINEERING**

Jiacun Wang, Chair, Department of Computer Science and Software Engineering

Joseph Chung, UNIX Administrator and Teacher

Michiko Kosaka, Associate Professor. PhD, New York University. Interests include natural language processing and artificial intelligence.

Francis C. Lutz, Professor. PhD, New York University. Interests include environmental engineering and curricular innovation. Active in educational issues through the American Society for Engineering Education and the National Society of Professional Engineers.

James McDonald, Associate Professor. PhD, New York University. Interests include software verification and validation, project management, and empirical software engineering.

Allen Milewski, Associate Professor. PhD, Brown University. Areas of interest include human-computer interactions, contextual communication and awareness, and global software development.

Mohammed S. Obaidat, Professor. PhD, Ohio State University. Interests include wireless communications and networks, telecommunications and networking systems, security of network, information, and computer systems, security of e-based systems, performance evaluation of computer systems, algorithms, and networks, modeling and simulation, high performance and parallel computing/computers, applied neural networks and pattern recognition, adaptive learning, and speech processing.

Daniela Rosca, Associate Professor. PhD, Old Dominion University. Interests include requirements elicitation, analysis and specification, and methodologies for the development and use of business rules.

Richard Scherl, Associate Professor. PhD, University of Illinois and University of Chicago. Interests include artificial intelligence (especially knowledge representation, automated reasoning, and natural language processing), cognitive science, and databases.

William Tepfenhart, Associate Professor. PhD, University of Texas. Interests include artificial
intelligence, software architecture, and software design.

Jack M. Van Arsdale, Associate Professor. MSEE, Polytechnic Institute of New York. Interests include digital and microcomputer-based design, digital phase-lock loop frequency synthesis, and digital synthesis.

Jiacun Wang, Associate Professor and Chair. PhD, Nanjing University of Science and Technology, China. Interests include software architecture, Petri nets, real-time systems, discrete event systems, telecommunications, and networking.

Cui Yu, Associate Professor. PhD, National University of Singapore. Interests include database management systems, spatial databases, and information storage and retrieval.

MASTER OF SCIENCE IN COMPUTER SCIENCE (MS)

The Master of Science in Computer Science provides a broad background in graduate-level computer science study. The thirty- to forty-five-credit program allows the student to choose a thesis option or a non-thesis option. Students may also choose to specialize in Computer Networks, Databases and Intelligent Information Systems, or Security of Information Systems and Networks. When the applicant has a strong background in computer science, such as a bachelor’s degree in computer science with excellent standing, up to fifteen credits (CS501B-CS509) may be waived. Other majors may be required to take some or all of these courses. These foundation courses must be completed with a minimum GPA of 3.0, and all prerequisite courses must be passed with a grade of “B-” or better.

Please refer to the curriculum charts in the appendix for program requirements. All curriculum charts are detailed and displayed in Appendix “B.”

• MS Computer Science, Thesis or Non-Thesis Track
• MS Computer Science, Computer Networks, Thesis or Non-Thesis Track
• MS Computer Science, Databases and Intelligent Information Systems, Thesis or Non-Thesis Track
• MS Computer Science, Security of Information Systems and Networks, Thesis or Non-Thesis Track

GRADUATE CERTIFICATE IN COMPUTER SCIENCE: SOFTWARE SYSTEMS DESIGN AND DEVELOPMENT

The Graduate Certificate Program in Computer Science: Software Systems Design and Development is specifically designed to provide essential software development skills, including computer programming, data structures, algorithms, and operating systems for graduates of programs with minimal or no computer science training. Those students receiving the certificate will be:

• Knowledgeable of and competent in the use of object-oriented programming languages and techniques, including advanced features of Java and C++ and efficient code design;
• Knowledgeable of fundamental data structures and computing algorithms;
• Knowledgeable of operating system concepts, design, development, and applications;
• Able to design and develop computer programs of realistic and practical complexity, either as individuals or as part of a team.

The certificate program will generally be a three- to five-course sequence, depending on the prior programming skills of the applicant. A student can be admitted to the certificate program with “advanced standing,” having been given credit for relevant experience or courses taken previously. However, a student must take at least three courses in the sequence at Monmouth in order to receive the certificate. If the applicant has some programming background, but insufficient or non-recent training with modern programming languages, he or she can be conditionally admitted and required to take a sixth course, CS501A, as an alternative to delaying admission while the programming prerequisite is being met.

The certificate program is intended to serve primarily part-time students employed by area business, education, and government organizations. It may also be an opportunity for professional development, career change, or career enhancement in situations where computer programming is a valued skill. Upon completion of the program with a GPA of 3.00 or better, the student will receive a certificate and guaranteed admission to the Computer Science Graduate Program at Monmouth University. However, none of the certificate courses can be
applied to the main eleven-course master’s degree requirement.

*Please refer to the curriculum chart in the appendix for program requirements. All curriculum charts are detailed and displayed in Appendix “B.”*

- Certificate Software Systems Design and Development

**MASTER OF SCIENCE IN SOFTWARE ENGINEERING (MS)**

Monmouth University was one of the first institutions in the United States to recognize the newly emerging discipline of Software Engineering by establishing a separate department to specialize in this strategic engineering discipline. The department offers a Master of Science Degree in Software Engineering and two graduate certificate programs: the Certificate in Software Development and the Certificate in Software Engineering.

The objective of the master’s degree program is for the student to master the necessary skills and knowledge that allow him or her to be an effective member of a software development team. The program’s educational objectives are to prepare students so that upon graduation they will:

1. Show mastery of the software engineering knowledge and skills and professional issues necessary to practice as a software engineer in a variety of application domains with demonstrated performance in at least one application domain;
2. Understand the relationship between software engineering and systems engineering and be able to apply systems engineering principles and practices in the engineering of software;
3. Show mastery of software engineering in at least one specialty, such as embedded devices, safety critical systems, highly distributed systems, software engineering economics, or one of the knowledge areas of the Graduate Software Engineering Reference Curriculum (GSWERC) body of knowledge;
4. Work effectively as part of a team, including teams that may be international and geographically distributed, to develop quality software artifacts, and to lead in one area of project development, such as project management, requirements analysis, architecture, construction, or quality assurance;
5. Reconcile conflicting project objectives, finding acceptable compromises within limitations of cost, time, knowledge, existing systems, and organizations;
6. Design appropriate software engineering solutions that address ethical, social, legal, and economic concerns;
7. Understand and appreciate the importance of feasibility analysis, negotiation, effective work habits, leadership, and good communication with stakeholders in a typical software development environment;
8. Learn new models, techniques, and technologies as they emerge, and appreciate the necessity of such continuing professional development;
9. Analyze a current significant software technology, be able to articulate its strengths and weaknesses, and be able to specify and promote improvements or extensions to that knowledge.

All classes are held in the late afternoon, and most of our students are from New Jersey’s premier software industries. The department offers the entire program at the main campus of Monmouth University. The Master of Science in Software Engineering degree is a thirty-credit curriculum, with four core courses, four advanced elective courses, and a six-credit thesis or practicum. The core courses provide the student with the foundations of modern software engineering. When the applicant has a background other than computer science or software engineering, up to twelve credits of foundation courses may be required before registering for the core courses. These foundation courses must be passed with a grade of “B-” or better. Students can opt for writing a thesis or participating in a group practicum for two semesters as their capstone experience before graduation.

For students who have already completed a bachelor’s degree in software engineering, the department offers an advanced track, which gives students the opportunity to earn a master’s degree after completion of a thirty-credit curriculum. In addition, students may choose between two paths within this track, the thesis or non-thesis option. If students choose the thesis option, they will complete the core courses, research and write a thesis over two semesters, and choose and complete two pairs of advanced elective courses. Students who choose the non-the-
sis option will complete the core courses and choose and complete three pairs of advanced elective courses. Finally, all students will take one advanced elective course from the list of non-paired courses.

Please refer to the curriculum charts in the appendix for program requirements. All curriculum charts are detailed and displayed in Appendix “B.”

- MS in Software Engineering, Advanced Track

SOFTWARE ENGINEERING CERTIFICATE PROGRAMS

The certificate in Software Development, which includes fifteen credits of foundation courses plus a three-credit project course, prepares students to become proficient software developers. It also serves as a foundation for those who do not have the necessary background but hope to enter the master’s degree program. It is the ideal starting point for those holding bachelor’s degrees in disciplines other than software engineering or computer science who are interested in a career in software engineering or who hope to do software development in their chosen field.

The certificate in Software Engineering is an eighteen-credit program that prepares graduates to become effective members of a software development team. Students gain an understanding of team capability, dynamics, and performance. Requirements include the fifteen credits of core courses needed for the Master of Science in Software Engineering, as well as a course (three credits) in software project management. (Up to fifteen credits of foundation courses may also be required.) Upon completion of this program, students will have the ability to design software that solves practical problems, a critical skill for career success and advancement.

Please refer to the curriculum charts in the Appendix “B” for program requirements.

MATHEMATICS

David C. Marshall, Chair, Department of Mathematics

Richard Bastian, Lecturer, PhD, Johns Hopkins University. Interests include applied mathematics, mathematics and culture, and philosophy of mathematics.

Barbara Lynn Bodner, Professor. EdD, Rutgers University. Interests include heuristic process use in problem-solving, integration of computer technology, and applications into the curriculum, as well as the study of mathematics from historical and artistic perspectives.

Suneal Chaudhary, Assistant Professor. PhD, UCLA. Interests include mathematical and computational finance, economics, and Monte Carlo methods.

Micah Chrisman, Assistant Professor. PhD, University of Hawaii. Interests include algebraic topology, low-dimensional topology, and knot theory.

Joseph Coyle, Associate Professor. PhD, University of Delaware. Interests include numerical analysis and inverse problems.

Bonnie Gold, Professor. PhD, Cornell University. Interests include philosophy of mathematics and innovation in undergraduate mathematics education.

Betty Liu, Professor. PhD, University of Maryland. Interests include numerical solution of differential equations and mathematical modeling.

David C. Marshall, Associate Professor and Chair, PhD, University of Arizona. Interests include number theory, commutative algebra, and the theory of bilinear and quadratic forms.

Susan H. Marshall, Associate Professor. PhD, University of Arizona. Interests include number theory, arithmetic geometry, and the learning and teaching of proof.

Emanuel Palsu-Andriescu, Lecturer. PhD, University of Rochester. Interests include microlocal analysis, Colombeau generalized functions, and Fourier integral operators.

Wai K. Pang, Assistant Professor. PhD, Texas Tech University. Interests include functional data analysis, image analysis, and multi-sample problems in Hilbert spaces.

Bruce Ralli, Lecturer. MS, Georgian Court University. Interests include teaching mathematics and technology in the classroom.

G. Boyd Swartz, Professor. PhD, New York University. Interests include computer modeling, object-oriented programming, and integration of computer technology into the curriculum.
