Majoring in Psychology @ Monmouth University

Highlights

- Psychology is so broad that students often have a variety of interests. Psychology has 44 elective credits which allows you to find your passion, explore your interests, and take courses that are best for you.
- Knowing your exact career path is difficult, and it is likely that you will change your mind. For these reasons, our major focuses on building transferrable skills that prepare you for whatever you decide to do.
- To help navigate the possible career paths, in addition to your advisor/mentor, we also have a dedicated career course and embed career/professional development (e.g., preparing a resume, interview skills, picking a graduate school, etc.) within required classes.
- We have over 150 internships for you to choose from in nearly every area of psychology. Each provides you with real world experience, and career opportunities for many students.
- Students have the chance to do an Animal Behavior Internship as part of our exclusive affiliation with Six Flags Wild Safari. In this course, students work with seals, elephants, giraffes, snakes, and lion cubs alongside Six Flags’ animal trainers.
- Unparalleled research training at the undergraduate level, where all students take three research courses with labs, then conduct and present their own empirical thesis.
- These unique experiences provide our graduates with a distinct advantage when applying for jobs and/or graduate programs.
