Computer Science and Software Engineering

Dr. James McDonald

Dr. James McDonald gave a presentation at the Annual Conference and Exposition of the American Society for Engineering Education (ASEE) in Chicago. The subject of the presentation was the use of employer surveys to evaluate the success of the software engineering program’s graduates in meeting the program’s educational objectives. Engineering programs seeking accreditation are required to conduct assessments to measure these results. However, many institutions have experienced great difficulty in meeting this requirement. The presentation described several techniques which had been developed by Monmouth University’s Software Engineering Department to improve the probability of successfully meeting this requirement. Those techniques were successful for us and the presentation was intended to encourage other engineering programs to make use of similar methods.

Karin Johnsgard

Karin Johnsgard and Dr. James McDonald gave a presentation at an NSF-sponsored workshop at Duke University. Presenters included faculty from 12 different institutions who were using a visualization software tool, called Alice, to introduce students to computer programming.

Their presentation described how they used Alice in two different introductory courses in computer science and software engineering to prepare students and to improve retention in the traditional first computer science course, which follows the introductory courses. Their results, which appear to be similar to results achieved at other institutions, indicate that there was an improvement in retention. However, there were not enough data points to draw statistically significant conclusions. Both departments plan to use Alice again next year, although with some changes in both courses. The PI for this work encouraged Karin and Jim to gather additional data and to prepare a paper for publication in one of the respected computer science or engineering education journals.

Dr. Wang presented a paper in the 3rd International Conference on Information Systems for Crisis Response and Management, Newark, NJ. The paper, entitled "Incident Command Systems Workflow Modeling and Analysis: A Case Study" was co-authored with Drs. Rosca, Tepfenhart and Milewski. The paper presents a novel approach to emergency response workflow modeling and verification. Drs. Milewski and Wang jointly organized and chaired a special session for this conference.
